

CONTRACT MEASUREMENTS & STUDIES

The innovative and multidimensional measurement of vebitoSCIENCE allows the detection of bending and torsional load of the foot, in shoes, for the first time.

GIVE PROOF TO SHOES AND ORTHOPEDIC DEVICES

This takes analysis of the foot to a new level and gives you the opportunity to give proof of the effect of shoes, orthopedic devices and treatments from a new perspective. Certainly also in combination with common measurements, as pressure measurement.

We offer contract measurements and studies for your individual needs.
We design those studies according to your individual targets and question.

SCIENTIFIC & INDEPENDENT

We guarantee a scientific and independent approach. On request also in cooperation with the University of Applied Sciences Münster.

OVERVIEW OF MEASUREMENT OPTIONS

COMPARISON

We compare two conditions such as two different shoe models or devices. Therefore we measure three defined test persons. You receive a short analysis with single parameters as minimum, maximum, range or other.

This measurement is eligible for a first outline in means of comparison or effect of your products.

ALL-ROUNDER

We examine two conditions for you, e.g. two shoe models with 20 test persons. You receive a statistical analysis of different parameters as maximum, minimum, range and a detailed report.

The all-rounder is a good instrument for the market launch of new products.

EXPERT

Two conditions are examined for you, e.g. two shoe models with 20 test persons. You receive a detailed statistical analysis with a point by point analysis and comparison of curve progressions as well as a detailed report.

The expert helps you to gain new findings to support your research and development.

INDIVIDUALIST

Certainly we can design the study and measurements just for your needs and questions.

We also would be happy to visit you on your request.

Get in touch! We will be happy to advise you.
